PHS 904  
Topics in Epidemiology: Global Health

The purposes of this course are to explore the relationship between globalization and health and provide students with an understanding of:  
(a) major indicators and determinants of health and health disparities across populations, from less to more developed countries;  
(b) the role of epidemiology in evaluating population health, and developing interventions to improve global health and reduce health disparities;  
and  
(c) some of the methodological and ethical considerations in international health research.

The course is also designed to expose students to health research and clinical work of current University of Wisconsin faculty members working in a range of disciplines relevant to global health, and to help students identify ways in which they might contribute in the future to improvements in global health.
